Description: (attach supplementary materials if needed)

Many students have difficulty sitting for any amount of time. Something that might help is to have several "learning consoles" in the classroom where the child stands while doing his work.

I saw a documentary on this where whole classrooms were done this way and the results of the study showed a marked increase in the grades, especially with children who had ADD. Perhaps to introduce it, a few in the classroom to start would be good. Then, when a child gets restless, he/she could go to the console to work for a while.
